

December 1st, 2019

To Whom It May Concern,

As the [REDACTED] at the Technical University of Denmark I am delighted to recommend Alexander to the doctoral program in Computer Science at Stanford. I have had the pleasure of supervising Alexander since through 2019. Alexander has a knack for generating novel ideas, doing cross-field collaborations, and executing research projects. In the past year Alexander has had an autonomous role where he split his time between teaching advanced topics and supervising M.Sc. projects — all of which he independently designed the material and recruited students for. Alexander's gumption and drive has been a joy to witness. The ability to independently define research projects and lead students with no prior research experience is difficult, but Alexander's five paper submissions, with a top submission to ICLR 2020, is a proof of his excellence.

I can with confidence say that no one in my 25 years at the Technical University of Denmark has taken supervision and student collaboration as serious as Alexander. Alexander has built a supervision structure with weekly research meetings, weekly one-on-one coding sessions, tailored courses on advance topics to elevate his students, journal clubs, and community events where students can present their findings. His efforts has not only resulted in significant academic findings, but motivated several of the students in our department to pursue academic careers with their newfound papers.

I strongly believe that Alexander Rosenberg Johansen will be an asset to any research lab. I am confident that with the ingenious academic capacity, leadership skills, and resourcefulness; he will be able to perform outstandingly even in a highly rigorous program. I therefore lend Alexander my enthusiastic support and shall appreciate your favorable consideration of his application.

Yours Sincerely,

[REDACTED]
Section for [REDACTED],
Technical University of Denmark
